

Name: Bañas, Angelica S.

Student No.: 202217084

Year, Course & Section: BSIT 3A

Subject: ITEC 101

Reflection - What did you learn in this activity?

Through this activity, I learned and refreshed many important skills. One of the biggest things I worked on was HTML, CSS, and JavaScript. Creating my portfolio website helped me remember how to use these languages properly. I also looked back at my old projects, which gave me ideas and inspiration for my portfolio. Along the way, I relearned things I had forgotten, and this activity helped me practice and improve my web development skills.

Aside from refreshing what I already knew, I also learned something completely new: GitHub. Before this, I had never really used GitHub, so I struggled at first. I ran into some problems, especially with connections, but I was able to fix them by using a relative path. Even though it was difficult at the beginning, I slowly got better at using GitHub. I learned how to move around the platform, understand different functions, and manage my files properly. In the end, I was able to host my portfolio website online, meaning I could not only see it on my computer but also open it on my phone.

Overall, this activity was a great learning experience. It helped me bring back my old knowledge and also learn new things. The problems I faced, especially with GitHub, taught me to be patient and keep trying until I found a solution. Now, I feel more confident in creating and hosting websites, and I am excited to use these skills in future projects.
